

80 O-RING	600 h	1:3	19 T
250 r/min	10 KW	100 L	49 L

As for the testing reports O'ring chains, sorry for the long time delay. It requires at least 500 hours without any stop.

The testing report on 80 O'ring chain compared with 80 standard chain. Enclosed is the picture for your review.

It's called the chain wearing comparison testing report. On the horizontal line, it means the time to do this test (Unit: Hour). On the vertical line, it means the chain elongation after continuous running in the testing machine (Unit: mm).

So you will see that the 80 O'ring chain is much better than the standard 80 chain.
